Store Guide

ADDING PRODUCTS & EDITING THE THEME

Everything here is done from your Shopify admin (**admin.shopify.com**). No code is needed.

Part 1 — Add a new product

1. Go to **Products → Add product**.
2. **Title** and **Description**: write the name and details customers will see.
3. **Media**: drag in the product photos. The first photo is the main image; the others appear in the card arrows and the quick-view gallery. Use the same shape for all photos (portrait 3:4 looks best).
4. **Price**: enter the price. For a sale, put the old price in **Compare-at price** — the old price shows crossed out.
5. **Variants**: click **Add options like size or color**.
   - Name the option exactly `Size` (or e.g. `Size (Her)` / `Size (Him)` for sets) — it shows as size buttons and powers the size guide link.
   - Name the colour option exactly `Color` (or `Colour`) — it shows as colour swatches.
   - Set the price and stock quantity for each variant.
6. **Tags** (right column) — these control the labels on the product card:

Tag	What it does
`women` / `men` / `together`	Shows the gender label on the card. If you add `together`, it wins over the other two.
`bestseller`	Shows the Bestseller badge.
`new`	Shows the New badge.
`color:copper`	Colour block when a product has no photo (copper, charcoal, slate, blush, mauve, burgundy, silver, cream, terracotta, sand, champagne, sage, ivory, taupe).

   To remove a tag, click the × on it. Tags are not case sensitive for the words above.
7. **Collections**: under **Product organization**, add the product to a collection (for example Women, Men or Together) so it shows on that page and in the Featured section.
8. Make sure **Status = Active** and **Online Store** is ticked under **Sales channels**, then press **Save**.

> **Check it:** open the store, go to the collection and confirm the card looks right. The search can take a few minutes to find a brand new product.

> **Hide or remove a product:** set Status to **Draft** to hide it temporarily, or use **⋯ → Delete** to remove it for good.

Many products at once

Tick products in the product list, then **⋯ → Add tags / Remove tags**, or use **Import** with a CSV file.

Part 2 — Edit text and images with the theme editor

Open the editor

1. Go to **Online Store → Themes**.
2. On your live theme press **Customize**.
3. Use the top bar to choose the page to edit (Home, Product, Collection, Cart…). Mobile/desktop icons preview each size.

Change any text or image

1. In the left sidebar click the section you want (or click directly on the part of the page).
2. Edit the field: type new text, or in an image box click **Select image → Upload new** (or choose one already in your library).
3. Press **Save** (top right). The change is live straight away.

> **Tip:** use a `|` in a slide title to start a new line, for example `Dressed for the|Hours Between`.

Home page sections

Section in the sidebar	What you can change
Hero Slider	Each slide: Image, small label, Title, Text, Button label and Button link. Add or remove slides with **Add slide** / the trash icon. Use images about 1800 px wide. The “Image URL” box is only a backup — an uploaded image always wins.
Trust marquee	The scrolling text strip (one line per item) and its colour.
Shop by Collection	Heading, and for each tile: the collection it links to, image, badge, small title and title.
Featured pieces	Heading, the collection to show, and how many products to display.
Testimonials	Heading, and each review: quote, name and location.
Life in Aurca	Heading, your Instagram link, and each photo with its caption and tag.

Header and footer (all pages)

Section	What you can change
Header	Logo, background colour, and which menu is shown.
Footer	Logo, colour, tagline, Instagram and TikTok links, headings, menu and copyright text.

Menus: to add or rename links go to **Content → Menus** in the admin, edit the menu, then pick it in the Header or Footer section.

Other pages

- **Product page** (choose Products in the top bar): shipping text and the Buy It Now button.
- **Cart**: free-shipping amount and the trust badges.
- **Theme settings** (gear icon, left edge): favicon, the Size guide table and the Support pop-up questions and email.

Part 3 — Store settings in the Shopify admin

These are not in the theme editor. Open **Settings** (bottom-left of the admin) and pick the item below.

Delivery prices — Settings → Shipping and delivery

1. Open your **General shipping rates** profile (**Manage rates**).
2. Under the **Egypt** zone, click **⋯ → Edit rate** to change a price, or **Add rate** for another one (for example Cairo vs. other cities, or Express).
3. For **free shipping above an amount**: Add rate → name it “Free shipping” → price 0 → **Add conditions → Based on order price** → enter the minimum (for example 2,500).
4. Press **Save**.

> **Keep the site in sync:** the free-shipping progress bar in the cart uses a separate number. Update it in **Customize → Cart** (and Cart drawer) → **Free shipping threshold**, and in the announcement bar text if it mentions the amount.

Payments — Settings → Payments

- **Cash on Delivery** is added under **Manual payment methods**. Click it to rename it, edit the instructions customers see, or **Deactivate** it.
- To take cards, add a provider available in Egypt (for example Paymob or PayTabs) from the Shopify App Store, then follow its setup steps. Shopify Payments is not available in Egypt.
- COD orders arrive as **Payment pending**. After the courier delivers, open the order and click **Mark as paid**.

Checkout — Settings → Checkout

- **Customer contact:** choose whether customers check out with email or phone.
- **Customer information:** make full name, company, address line 2 and phone required, optional or hidden.
- **Marketing:** show or hide the “Email me with news and offers” tick box.
- **Address autocomplete** and **Abandoned checkout emails** are also on this page.
- Colours and logo of the checkout page: **Settings → Checkout → Customize**, or **Online Store → Themes → Customize → Checkout**.

Notifications — Settings → Notifications

1. Open **Customer notifications** to see the emails customers receive (Order confirmation, Shipping confirmation, Out for delivery, Delivered, Refund…).
2. Click one to edit the subject, text and wording. Use **Preview**, then **Save**.
3. Use **Send test email** before relying on a change.
4. **Staff order notifications:** add the email that should be told about each new order. **Sender email** (the “from” address) is on the same page.

Customer accounts — Settings → Customer accounts

- Choose **Accounts are disabled** (guest checkout only), **optional** or **required**.
- Pick **New customer accounts** (customers log in with a code by email, page hosted by Shopify) or **Classic** (email and password, uses the login pages in this theme).
- The header’s Account icon already links to whichever login page is active.
- To view customers and their orders: **Customers** in the main admin menu.

Taxes — Settings → Taxes and duties

1. Open **Egypt** and tick **Collect tax**; enter the VAT rate (14% in Egypt) — confirm with your accountant.
2. Choose **Include tax in product prices** (customers see the same price at checkout) or leave it off (tax is added at checkout).
3. Set whether shipping charges are taxed, then **Save**.

> **Before any big change:** place a test order (add to cart → checkout) and check the shipping price, payment option, tax line and the confirmation email are what you expect.

Common questions

Problem	Fix
I changed text but the site looks the same	Did you press Save? Then refresh the page (Ctrl+Shift+R).
A product doesn't show on the site	Status must be Active, Online Store ticked, and it must be in a collection.
Size buttons or swatches are missing	Check the option names are exactly `Size` / `Color`.
A badge or label is wrong	Check the product's tags (women / men / together / new / bestseller).
I made a mistake in the editor	Use the undo arrow at the top of the editor. Before big changes, make a backup: **Themes → ⋯ → Duplicate**.
